Webhooks Data Transmission Spec v1

Date	Revision Note
3/10/2026	Update partial_month documentation and add partial_month_start and partial_month_end
2/9/2026	Initial document created

Introduction

This document outlines the API specification implemented by partners to receive structured JSON representations of income verification data from the Verify My Income platform.

The partner must build this API endpoint and ensure that data is ingested into the correct case within the eligibility management system.

Environments

The partner must provide two distinct endpoints to the VMI team. Each environment will utilize unique API keys.

Environment Name	VMI Environment	Sample Path
UAT	Demo	`https://uat.your-agency.gov/api/v1/income-report`
Production	Production	`https://your-agency.gov/api/v1/income-report`

API Specification

Receive income report: POST /api/v1/income-report

- **Method**: `POST`
- **Path**: `/api/v1/income-report`
- **Security:** The endpoint must only accept requests over TLS.
- **Authentication**: The partner will supply an API key GUID that will be sent along with all requests as a header.

This API endpoint must be built by the partner and will receive an income report as structured JSON data. The partner can suggest an alternative path as long as it contains a version number.

Versioning Policy

VMI uses semantic versioning in the API path (e.g., /v1/).

Minor Changes: (e.g. adding optional fields) will be done within the current version.

Major Changes: (e.g. removing required fields or changing data types) will result in a new version (e.g., /v2/).

Partners are expected to build "flexible" parsers that do not fail when encountering new, unrecognized JSON keys.

Request Headers

The following headers are required for every transmission to ensure security and message integrity.

Header	Description
`X-VMI-Timestamp`	Seconds since the Unix epoch (used to verify the request signature).
`X-VMI-Signature`	Calculated signature based on the request body.
`X-VMI-Confirmation-Code`	Unique confirmation code of the submitted record (e.g., "LALDH00100001").
`X-VMI-API-Key`	Unique secure GUID provided by the partner.

`Content-Type`	Must be `application/json`.
`Content-Length`	Number of bytes in the body.

Additional headers used for authentication may be requested by the partner.

Request Body

The request body contains the income data. This payload is formatted as a JSON object to allow for direct field mapping into the eligibility management system.

Data Types

- **Date:** String in `YYYY-MM-DD` format (ISO-8601).
- **DateTime:** String in `YYYY-MM-DDTHH:MM:SSZ` format (ISO-8601 UTC).
- **Decimal:** Number with two decimal places.
- **Enum:** A string that must match a specific set of allowed values.

▼ **Report Metadata** (object)

Field Name	Type	Nullable?	Description
`confirmation_code`	String	No	Unique confirmation code of the submitted record.
`report_date_range`	Object	No	
├ `start_date`	Date	No	Earliest date of review period
└ `end_date`	Date	No	Last date of review period
`consent_timestamp_utc`	DateTime	No	Date and time when client provided legal consent for data retrieval.

▼ **Client Information** (object) - Varies by partner

This object contains unique identifying information to link the report to the correct record in the partner's eligibility database. These fields (e.g. `case_number`, `last_name`) will be agreed upon with each partner.

▼ **Employment Records** (array)

Field Name	Type	Nullable?	Description
`employment_type`	Enum	No	Must be: `W2` or `GIG`
`employer_information`	Object	No	
├ `employer_name`	String	No	
├ `employer_phone`	String	Yes	
└ `employer_address`	Address (object)	Yes	
`employment_status`	Enum	Yes	Must be: `EMPLOYED`, `ACTIVE`, `INACTIVE`, `TERMINATED`
`employment_start_date`	Date	Yes	
`employment_end_date`	Date	Yes	If the client is still employed, value will be `null`.
`employee_information`	Object	No	
├ `full_name`	String	Yes	Full name of client as in the payroll system.
└ `ssn`	String	Yes	Last four digits of client SSN as reported by payroll system. Format: `XXX-XX-1234`
`pay_frequency`	Enum	No	Must be: `ANNUALLY`, `BIWEEKLY`, `DAILY`, `HOURLY`, `MONTHLY`, `QUARTERLY`, `SEMIMONTHLY`, `SEMIWEEKLY`, `VARIABLE`, `WEEKLY`
`base_compensation`	Object	Yes	If no information is available, this value is

			`null`.
├ `rate`	Decimal	Yes	Wages in dollars
└ `interval`	Enum	Yes	Must be: `HOURLY`, `DAILY`, `WEEKLY`, `BIWEEKLY`, `SEMIMONTHLY`, `MONTHLY`, `ANNUAL` , `SALARY`
`w2_monthly_summaries`	Array	Yes	If `employment_type` is `W2`, contains zero or more W2 Monthly Summary objects, otherwise `null` .
`gig_monthly_summaries`	Array	Yes	If `employment_type` is `GIG`, contains zero or more Gig Monthly Summary objects, otherwise `null` .
`w2_payments`	Array	Yes	If `employment_type` is `W2`, contains zero or more W2 Payment objects, otherwise `null` .
`gig_payments`	Array	Yes	If `employment_type` is `GIG`, contains zero or more Gig Payment objects, otherwise `null` .

▼ Address (object)

Field Name	Type	Nullable?	Description
`line1`	String	Yes	Line one of address
`line2`	String	Yes	Line two of address
`city`	String	Yes	City of address

`state`	String	Yes	State or territory the address is in
`postal_code`	String	Yes	Postal code of address
`country`	String	Yes	Country of Address. Defaults to 'USA'

▼ W2 Monthly Summary (object)

Field Name	Type	Nullable?	Description
`month`	Integer	No	Single digit representation of the month, 1 - 12
`year`	String	No	4 digit year in `YYYY` format
`total_hours`	Decimal	Yes	Total hours for the month as reported by payroll source.
`number_of_paychecks`	Integer	No	Number of times paid in the month within the 90-day reporting window.
`gross_income`	Decimal	No	Sum of incoming payment within the 90-day reporting window.
`partial_month`	Boolean	No	'true' if this month represents less than a full month
`partial_month_start`	Date	Yes	Start of partial month period. Will be null if `partial_month` is false
`partial_month_end`	Date	Yes	End of partial month period. Will be null if `partial_month` is false

▼ Gig Monthly Summary (object)

Field Name	Type	Nullable?	Description

`month`	Integer	No	Month the summary is for
`year`	String	No	4 digit year in `YYYY` format
`total_hours`	Decimal	Yes	Total hours reports for the month.
`gross_earnings`	Decimal	Yes	Sum of income payments for the month.
`mileage_expenses`	Array	Yes	For certain `GIG` employments only, variable depending on `GIG` type. Verified mileage expenses can be calculated to cover costs including gas, car payments or leasing fees, car insurance, repairs, and maintenance.
├ `rate`	Decimal	Yes	IRS-defined deduction rate per mile in **cents**.
└ `miles`	Decimal	Yes	Distance in miles.

▼ W2 Payment (object)

Field Name	Type	Nullable?	Description
`pay_date`	Date	Yes	
`pay_period`	Object	Yes	
├ `start`	Date	Yes	
└ `end`	Date	Yes	
`gross_pay`	Decimal	No	If this value is not represented within pay stubs, a value of `0` will be sent.
`net_pay`	Decimal	No	If this value is not represent within pay

			stubs, a value of `0` will be sent.
`hours_worked`	Decimal	Yes	
`base_hours_paid`	Decimal	Yes	
`gross_pay_ytd`	Decimal	No	A `null` value will send as `0`.
`gross_pay_line_items`	Array	No	Contains zero or more items listed on as part of the gross pay.
├ `name`	String	Yes	
└ `amount`	Decimal	No	
`deductions`	Array		Contains zero or more items listed on as deductions.
├ `name`	String	Yes	
├ `type`	Enum	No	Must be: `PRETAX`, `POSTTAX`, or `UNKNOWN`
└ `amount`	Decimal	No	

▼ **Gig Payment (object)**

Field Name	Type	Nullable?	Description
`pay_date`	Date	No	
`amount`	Decimal	No	

Sample Payload

```
POST /api/v1/income-report HTTP/1.1
Host: your-agency.gov

        ],
        "w2_payments": null
      }
    ]
  }
```

Error Handling and Retry Logic

VMI relies on semantic HTTP status codes to determine if the data was correctly received.

Status Codes

HTTP Status Code	Definition	Action
200 OK	The data was successfully received and ingested.	Mark successful.
400 Bad Request	The data in the body is malformed or fails schema validation.	Send to error queue.
401 Unauthorized	The X-VMI-Signature header or API key verification failed.	Attempt retry.
413 Payload Too Large	Content-Length exceeds partner server size limit.	Send to error queue.
422 Unprocessable Entity		Send to error queue.

429 Too Many Requests	Rate of requests is exceeding partner server limits.	Attempt retry.
500 Internal Error	System error during processing.	Attempt retry.
503 Service Unavailable	The partner server is temporarily unavailable or undergoing maintenance.	Attempt retry.
504 Gateway Timeout	Communication error between application and partner server.	Attempt retry.

Partners are encouraged to use additional codes or include descriptive error messages to assist in troubleshooting.

Example descriptive error message:

```
{
  "error_code": "VALIDATION_ERROR",
  "message": "The request was well-formed but contains error
s.",
  "errors": [
    {
      "field": "gross_pay",
      "reason": "Value must be a positive decimal."
    },
    {
      "field": "case_number",
      "reason": "This field is required."
    }
  ]
}
```

Retry Logic

If a non-success status code is returned, the VMI platform will:

- Automatically retry delivery up to **five additional times**.

- Conduct retries over a **10-minute window**.
- Move the record to an **error queue** for further inspection if the final attempt fails.
